

EGGER UK

Rework services

Customer profile

With its two chipboard manufacturing sites located at Hexham and Auchinleck, EGGER in the UK annual produces enough wood-based products to fill 27,500 lorry trailers.

These products are supplied to businesses across the UK, who operate in the furniture, interior design and building markets.

EGGER (UK) Limited undertakes ongoing multi-million pound investments to ensure it operates some of the most technologically advanced chipboard plants in Europe.

Challenge

EGGER contacted MCR Services with a rework project involving 25metre rolls of edge-banding.

The manufacturer required the rolls to be cut down to two different sizes - 5m and 1.5m - to sell on to customers.

This project would be ongoing to maintain good stock levels at EGGER for dispatch to its customers.

Solution

Using a simple method in the workshop, the team at MCR set up a table length with marked up points for the edge-banding cuts.

It's a relatively straightforward project and something the team can do swiftly as and when EGGER stock levels need to be increased.

“ MCR are well set up to provide this reworking resource and it was ideal for Egger UK to contract this work.

The task was carried out accurately and efficiently and I will certainly be looking at placing more work with MCR as it develops.

To have MCR on the doorstep has been perfect.

Thank you for the support MCR.

Will Masterton, Purchasing Manager
